## **CLAIMS**

We claim:

5

1. A method for automated enrollment and activation of a mobile telematics system comprising:

receiving a customer data record of a customer at a communication services database;

10

20

25

determining a command signal based on the customer data record; sending the command signal to a telematics unit of a vehicle; enrolling the customer in a telematics-unit access system based on the command signal; and

activating the telematics unit of the telematics-unit access system

15 based on the command signal.

2. The method of claim 1 wherein sending a command signal to a telematics unit of a vehicle further comprises:

sending the command signal from an external telematics database to a communication services manager in a telematics call center; and sending the command signal from the communication services manager in the telematics call center to the telematics unit of a vehicle.

3. The method of claim 1 wherein sending a command signal to a telematics unit of a vehicle further comprises:

sending the command signal from a communication services database in a telematics call center to a communication services manager in the telematics call center; and

sending the command signal from the communication services
manager in the telematics call center to the telematics unit of a vehicle.

- 4. The method of claim 1 wherein the customer data record is received from a source selected from the group consisting of: an enrollment website, the customer delivery record at a vehicle dealership, a telephone line or from the telematics unit.
- 5. The method of claim 1 wherein the customer data record is obtained in segments received from more than one source.

5

15

20

- 10 6. The method of claim 1 wherein the command signal includes customer data.
  - 7. The method of claim 1 wherein the command signal includes customer-desired features to be activated in the telematics-unit access system.
  - 8. The method of claim 7 wherein the customer-desired features are selected from the group consisting of navigation assistance, real-time traffic advisories, directory assistance, roadside assistance, business or residential assistance, information services assistance, emergency assistance, and communications assistance, vehicle personalization, vehicle data upload, vehicle data download, unlock/lock vehicle, flash lights, honk horn, perform diagnostic functions and perform vehicle tracking functions.
- 9. The method of claim 1 wherein activating the telematics unit of the
   25 telematics-unit access system setup further comprises;
   configuring the hardware of the telematics unit in the vehicle.

10. A computer usable medium storing a computer program comprising:

5

10

20

computer readable code for receiving a customer data record of a customer at a communication services database;

computer readable code for determining a command signal based on the customer data record;

computer readable code for sending the command signal to a telematics unit of a vehicle;

computer readable code for enrolling the customer in a telematicsunit access system based on the command signal; and

computer readable code for activating the telematics unit of the telematics-unit access system based on the command signal.

15 11. The computer usable medium storing a computer program of claim 10 wherein sending a command signal to a telematics unit of a vehicle further comprises:

computer readable code for sending the command signal from an external telematics database to a communication services manager in a telematics call center; and

computer readable code for sending the command signal from the communication services manager in the telematics call center to the telematics unit of a vehicle.

12. The computer usable medium storing a computer program of claim10 wherein sending a command signal to a telematics unit of a vehicle further comprises:

computer readable code for sending the command signal from a communication services database in a telematics call center to a communication services manager in the telematics call center; and

5

10

25

computer readable code for sending the command signal from the communication services manager in the telematics call center to the telematics unit of a vehicle.

- 13. The computer usable medium storing a computer program of claim10 wherein activating the telematics unit of the telematics-unit access systemsetup further comprises;
- 15 computer readable code for instructing a hardware configuration to be set in hardware of the telematics unit in the vehicle.
- 14. A telematics-unit access system comprising:
   means for receiving a customer data record at a communication
   20 services database;

means for determining a command signal based on the customer data record:

means for sending the command signal to a telematics unit of a vehicle;

means for enrolling the customer in a telematics-unit access system based on the command signal; and

means for activating the telematics unit of the telematics-unit access system based on the command signal.

- 15. The telematics-unit access system of claim 14, further comprising:
  means for sending the command signal from an external telematics
  database to a communication services manager in a telematics call center; and
  means for sending the command signal from the communication
  services manager in the telematics call center to the telematics unit of a vehicle.
- The telematics-unit access system of claim 14, further comprising: means for sending the command signal from a communication
   services database in a telematics call center to a communication services manager in the telematics call center; and sending the command signal from the communication services manager in the telematics call center to the telematics unit of a vehicle.
